

# High Pressure Thermoplastic Hose

**Technology leaders**

**Swiss manufacturing know how**

**High value**

**Flexible yet hard wearing**

**Hoses for most applications**

## Exitflex Programme

**EXITFLEX high pressure Thermoplastic Hoses are suitable for:-  
HYDRAULICS, WATER JETTING and PAINT SPRAYING**

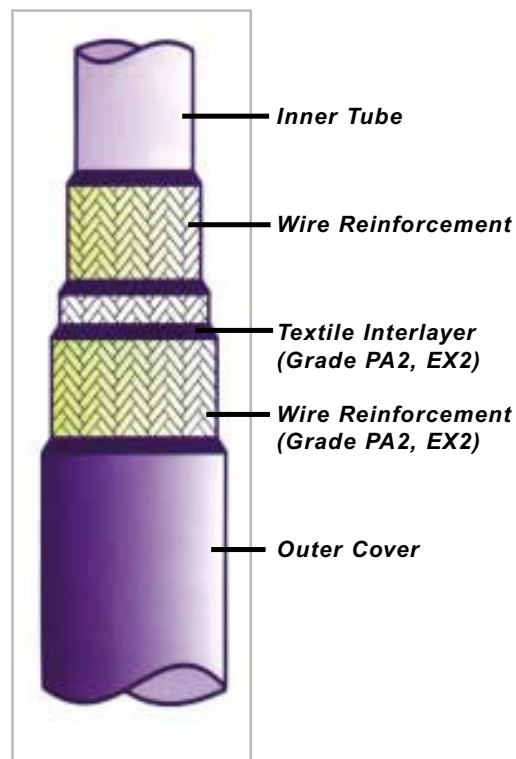

EXITFLEX take particular care with the braiding technique of their hose range. The technologies employed provide accurate control over the characteristics required for different hose grades.

Wire braided reinforcement is of woven high tensile carbon steel braids which give the hose its great strength and ensure 100% electrical continuity throughout the hose. High specification textile braided hoses are also in the range for use where conductivity is not required.

Top quality materials used in the manufacture of EXITFLEX hoses, combined with Swiss know how, gives an extra strong light weight hose having excellent abrasion and cover wear resistance in addition to tolerance to a great many chemicals, solvents and water.

Textile braided hoses are available both in conductive and non-conductive varieties. The range in particular has excellent lay flat characteristics and superior pulsation absorption capabilities.

EXITFLEX is suitable for continuous use with many solvents, however it is recommended that final selection should be made after consulting the EXITFLEX chemical resistance chart or after consultation with your EXITFLEX distributor.

**EXITFLEX are major suppliers to the paint spray industry with the finest range of products available in the market place today.**
